## Major Breach of Data

**The Problem:** Office and home networks are essential tools that have become the single most vulnerable security hole in our personal and professional lives. Non-existent firewalls, outdated virus protection, unsecured wireless networks and lack of education allow sophisticated hackers, spammers, virus makers and malicious spyware to steal countless unpaid hours and worse...our personal and corporate information through holes in our networks. PCs infected with worms and viruses become bogged down and sluggish then spread worms into each and every contact in your address book and contact manager further infecting and contaminating your contacts, damaging client relations and making you potentially liable to lawsuits. Furthermore, studies show that while 77% of us believe we are protected, as much as 2/3rds of all PCs are vulnerable.

**The Solution:** Increase awareness of threats and learn how to use the essential tools necessary to prevent your PC from being used as a virus server. For almost every security vulnerability there is a user friendly software or hardware device to keep your data safe. Learn how to respond to cyber security issues and how to stay safe online. This program is presented in simple to understand, non technical language using every day examples.

### You Learn How To:

- Identify existing laws that make you vulnerable.
- Understand how hackers get in your networks.
- Defend against viruses and spyware.
- Learn how to set up firewalls.
- Protect email and proprietary information.
- Speed up PC performance.
- Clean out malicious key-logging programs.
- Prevent spam, pop-ups and other annoyances.
- Access free resources to protect your data.
- Protect wireless networks.
- Save at least 50 hours a year...no kidding.
